

# Dirty Water Diverter

All Your Rainwater Needs @ Plastec

ID:  
14550

In between rains, your roof accumulates dirt, insect, bird droppings and other impurities. When it rains the first volume of water to run off your roof contains all these nasties, which will contaminate your rainwater tank.

With Plastec's Dirty Water Diverter installed, the first volume of rain is diverted away from your tank, helping to ensure cleaner water for you and your family.

“**Cleaner**  
water in your  
rainwater tank,”

# Dirty Water Diverter

## Rainwater Range

- Diverts first flush of water.
- Used in conjunction with Leaf Guard range.
- 90mm Pipe required for installation (not included).  
Note: Required pipe length is dependent on water capture requirements. 1 m length = 5.7 litres of capture.
